Foreword.....	xiii
Preface.....	xv
Introduction: The Right Brain in the Right Place (Why We Need Autonomous AI).....	xxv

Part I. When Automation Doesn't Work

1. Sometimes Machines Make Bad Decisions.....	3
Math, Menus, and Manuals: How Machines Make Automated Decisions	5
Control Theory Uses Math to Calculate Decisions	5
Optimization Algorithms Use Menus of Options to Evaluate Decisions	9
Expert Systems Recall Stored Expertise	21
2. The Quest for More Human-Like Decision-Making.....	27
Augmenting Human Intelligence	28
How Humans Make Decisions and Acquire Skills	29
Humans Act on What They Perceive	30
Humans Build Complex Correlations into Their Intuition with Practice	31
Humans Abstract to Strategy for Complex Tasks	31
There's a New Kind of AI in Town	36
The Superpowers of Autonomous AI	40
Autonomous AI Makes More Human-Like Decisions	41
Autonomous AI Perceives, Then Acts	41
The Difference Between Perception and Action in AI	42
Autonomous AI Learns and Adapts When Things Change	43
Autonomous AI Can Spot Patterns	43

Autonomous AI Infers from Experience	44
Autonomous AI Improvises and Strategizes	44
Autonomous AI Can Plan for the Long-Term Future	45
Autonomous AI Brings Together the Best of All Decision-Making Technologies	46
When Should You Use Autonomous AI?	46
Autonomous AI Is like a Brilliant, Curious Toddler That Needs to Be Taught	47

Part II. What Is Machine Teaching?

3. How Brains Learn Best: Teaching Humans and AI.....	53
Learning Multiple Skills Simultaneously Is Hard for Humans and AI	53
Teaching Skills and Strategies Explicitly	54
Teaching Allows Us to Trust AI	58
The Mindset of a Machine Teacher	60
Teacher More Than Programmer	60
Learner More Than Expert	62
What Is a Brain Design?	62
How Decision-Making Works	63
Acquiring Skill Is like Learning to Navigate by Exploring	68
A Brain Design Is a Mental Map That Guides Exploration with Landmarks	69
4. Building Blocks for Machine Teaching.....	73
Case Study: Learning to Walk Is Hard to Evolve, Easier to Teach	76
So, Why Do We Walk?	77
Strategy Versus Evolution	78
Teaching Walking as Three Skills	81
Concepts Capture Knowledge	84
Skills Are Specialized Concepts	84
Brains Are Built from Skills	86
Building Skills	86
Expert Rules Inflate into Skills	87
Perceptive Concepts Discern or Recognize	91
Directive Concepts Decide and Act	96
Selective Concepts Supervise and Assign	97
Brains Are Organized by Functions and Strategies	99
Sequences or Parallel Execution for Functional Skills	100
Hierarchies for Strategies	108
Visual Language of Brain Design	113

Part III. How Do You Teach a Machine?

Understanding the Process	117
Meet with Experts	118
Ask the Right Questions	118
Case Study: Let's Design a Smart Thermostat	119

5. Teaching Your AI Brain What to Do. 121

Determining Which Actions the Brain Will Take	122
Perception Is Required, but It's Not All We Need	122
Sequential Decisions	123
Triggering the Action in Your AI Brain	124
Setting the Decision Frequency	125
Handling Delayed Consequences for Brain Actions	125
Actions for Smart Thermostat	127

6. Setting Goals for Your AI Brain. 129

There's Always a Trade-off	129
Throughput Versus Efficiency	131
Supervisors Have Different Goals Than Crews Do	132
Don't Prioritize Goals; Balance Them Instead	133
Watch Out for Expert Rules Disguised as Goals	133
Ideal Versus Available	134
Setting Goals	135
Step 1: Identify Scenarios	135
Step 2: Match Goals to Scenarios	136
Step 3: Teach Strategies for Each Scenario	137
Goal Objectives	137
Maximize	137
Minimize	137
Reach, like the Finish Line for a Race	137
Drive, like the Temperature for a Thermostat	138
Avoid, like Dangerous Conditions	138
Standardize, like the Heat in an Oven	139
Smooth, like a Line	139
Expanding Task Algebra to Include Goal Objectives	140
Setting Goals for a Smart Thermostat	141

7. Teaching Skills to Your AI Brain. 143

Teaching Focuses and Guides Practice (Exploration)	144
Skills Can Evolve and Transform	147
Skills Adapt to the Scenario	148
Levels of Teaching Sophistication	148

The Introductory Teacher Conveys the Facts and Goals	149
The Coach Sequences Skills to Practice	149
The Mentor Teaches Strategy	150
The Maestro Democratizes New Paradigms	151
How Maestros Democratize Technology	153
Levels of Autonomous AI Architecture	154
Machine Learning Adds Perception	155
Monolithic Brains Are Advanced Beginners	156
Concept Networks Are Competent Learners	157
Massive Concept Networks Are Proficient Learners	159
Pursuing Expert Skill Acquisition in Autonomous AI	160
Brains That Come with Hardwired Skills	161
Brains That Define Skills as They Learn	162
Brains That Assemble Themselves	164
Brains with Skills That Coordinate	165
Steps to Architect an AI Brain	166
Step 1: Identify the Skills That You Want to Teach	166
Step 2: Orchestrate How the Skills Work Together	168
Step 3: Select Which Technology Should Perform Each Skill	168
Pitfalls to Avoid When Teaching Skills	168
Pitfall 1: Confusing the solution for the problem	169
Pitfall 2: Losing the forest for the trees	169
Example of Teaching Skills to an AI Brain: Rubber Factory	169
Brain Design for Our Smart Thermostat	171
8. Giving Your AI Brain the Information It Needs to Learn and Decide.....	173
Sensors: The Five Senses for Your AI Brain	174
Variables	174
Proxy Variables	175
Trends	176
Simulators: A Gym for Your Autonomous AI to Practice In	176
Simulating Reality Using Physics and Chemistry	179
Simulating Reality Using Statistics and Events	179
Simulating Reality Using Machine Learning	179
Simulating Reality Using Expert Rules	180
Sensor Variables for Smart Thermostat	180

Part IV. Tools for the Machine Teacher

9. Designing AI Brains That Someone Can Actually Build.....	185
Designers and Builders Working Together in Harmony (Mostly)	185

The Autonomous AI Design Fallacy Designs but Won't Iterate	187
The Autonomous AI Implementation Fallacy Skips Design Altogether	188
Specification for Documenting AI Brain Designs	188
Platform for Machine Teaching	190
Platform for Wiring Multiple Skills Together as Modules	190
What Difference Will You Make with Machine Teaching?	191
Glossary.....	193
Index.....	195
